

Product Data Sheet

Technospray 4

Heavy-duty non-caustic alkaline formulation designed to operate in high performance single or multi-stage aqueous spray wash equipment.

Ideal for both cast and stainless steel substrates where heavy oil and grease deposits are encountered.

Exceptional cleaning on aluminium makes it an ideal formulation for re-manufacturing where mixed metals are requiring cleaning within a single wash unit.

Solution strengths of 2 – 4 % and wash temperatures between 65 – 75 °c.

Excellent corrosion inhibition package allows for both inter-stage and long term storage requirements.

Packaging options available, 25 litre containers, 200 litre barrels and 1000 litre IBC (intermediate bulk containers)

For information on applications or to discuss a potential trial contact us at info@sonikem.co.uk
